## PROFILE

As a Laboratory Analyst, I leverage my analytical chemistry background and data analytics skills to turn laboratory and production data into actionable insights. I analyse quality results, identify trends and investigate off-specification material to support root-cause analysis and process improvement. By combining laboratory expertise with Excel, SQL, Python and Power BI, I bring a data-driven approach to quality monitoring, reporting and operational efficiency, with a focus on reducing waste, improving product consistency and supporting informed business decisions.

## TECHNICAL SKILLS

- Data Analysis: Data Cleaning, Data Transformation, Exploratory Data Analysis (EDA), Data Validation, Trend Analysis, KPI Reporting
- Excel: Pivot Tables, Pivot Charts, Formulas, Data Cleaning, Data Analysis, Dashboard Development
- SQL: Joins, CTEs, Subqueries, Aggregations, Window Functions, Relational Databases, SQLite
- Python: pandas, matplotlib, Data Cleaning, Data Analysis, Data Visualisation
- Power BI: DAX, Data Modelling, Interactive Dashboards, KPI Development, Data Visualisation
- Data & BI: ETL/ELT Concepts, Business Intelligence, Data Quality, Business Reporting

## DATA ANALYTICS PROJECTS

Conducted an end-to-end analysis of a hospitality business to assess performance, identify improvement opportunities and support business modernisation through data-driven decision-making.

Hospitality Business Anlaytics | Excel, SQL, Python & Power BI

- Analysed 149,116 transactions to evaluate revenue, store performance, product categories and purchasing patterns.
- Used PivotTables, formulas, data cleaning and validation techniques to calculate KPIs including $698K total revenue, 214K units sold and $4.69 average transaction value.
- Built an Excel dashboard to visualise monthly, store, product, weekday and hourly sales performance

Hospitality Business Anlaytics | SQL & Python

- Designed a normalised SQLite relational database and analysed transaction data using SQL and Python.
- Wrote 12 analytical SQL queries using joins, CTEs, subqueries and window functions to analyse revenue trends, product rankings, store performance and pricing.
- Used Python, pandas and matplotlib for data analysis and visualisation, identifying key patterns in peak sales periods and product performance.

Hospitality Business Anlaytics Dashboard & Business Analysis | Power BI

- Developed an interactive Power BI dashboard using DAX, KPI cards, slicers and Top N analysis to monitor sales performance across stores, products and time periods.
- Identified that 36.7% of revenue was generated between 8–10 AM, providing evidence for staffing and operational recommendations.
- Translated analytical findings into business recommendations covering staffing, merchandising, growth planning and data quality.

## PROFESSIONAL EXPERIENCE

Orion Engineered Carbons | Laboratory Analyst
May 2026 – Present | Gqeberha, South Africa

- Collect, validate and analyse laboratory and production data to monitor product quality, identify process variations and support data-driven decision-making.
- Investigate off-specification results and analyse trends to support root-cause investigations and continuous improvement initiatives.
- Collaborate with production and quality teams to interpret test results, communicate findings and support corrective actions.
- Contribute to process improvement initiatives focused on reducing grade change time, minimising off-specification material and improving operational efficiency.

Blue Bubbles Manufacturing | Laboratory Analyst
June 2024 – October 2024 | South Africa

- Analysed data from over 100 manufacturing batches to identify trends, anomalies and opportunities for process improvement.
- Cleaned, transformed and validated operational datasets to improve data quality and reliability for analysis.
- Applied statistical analysis to evaluate product quality, investigate process variations and support evidence-based decisions.
- Communicated analytical findings and recommendations to cross-functional teams to support manufacturing performance improvements.
- Contributed to data-driven process improvements that increased product consistency by approximately 20%.

Axalta Plascon (Pty) Ltd | Laboratory Technician
January 2023 – December 2023 | Gqeberha, South Africa

- Analysed formulation and production data to identify inconsistencies, maintain product quality and ensure compliance with customer specifications.
- Performed data validation and investigated formulation variations to support quality assurance and improve manufacturing efficiency.
- Evaluated colour-matching and formulation trends to identify opportunities to reduce rework and improve product consistency.
- Used Laboratory Information Management Systems (LIMS) to maintain data integrity, track results and support accurate reporting.
- Developed and validated three automotive colour formulations approved by Ford South Africa, supporting product development and customer requirements.

## EDUCATION & CERTIFICATIONS

ExploreAI Academy
Data Engineering Programme| September 2025 – Present
- SQL, Python, Data Pipelines, Power BI, Data Modelling, Data Visualisation, Cloud Data Concepts

Walter Sisulu University
Advanced Diploma in Chemistry | 2024
- Analytical Chemistry, Physical Chemistry, Mathematics, Organic Chemistry, Inorganic Chemistry

Walter Sisulu University
Diploma in Analytical Chemistry | 2020 – 2023
- Analytical Chemistry, Physical Chemistry, Mathematics, Organic Chemistry, Polymer
